

CHANCE HAMMACHER

Senior Software Engineer | Full-Stack Web Development | Cloud & SaaS

608-636-5666 | chance.hammacher@gmail.com | Madison, WI | [Linkln](#) | [Github](#)

PROFESSIONAL SUMMARY

Senior software engineer with 11+ years of experience designing, developing, and operating production software, including 8+ years building healthcare-focused SaaS applications. Experienced in end-to-end ownership across React and TypeScript frontends, Node.js backend services, REST APIs, PostgreSQL, AWS, Kubernetes, and CI/CD. Proven ability to translate business requirements into maintainable software, lead technical initiatives, modernize application architecture and user experiences, and deliver secure solutions in regulated environments.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL, Java, C/C++

Frontend: React, HTML5, CSS3, Tailwind CSS, Bootstrap, Responsive Design, CMS website

Backend & Data: Node.js, Express.js, REST APIs, PostgreSQL, SQLite, Relational Data Modeling

Cloud & Platform: AWS, Kubernetes, Docker, Helm, Linux

DevOps: Git, GitHub, GitLab, CircleCI, CI/CD, Deployment Automation

Security & Practices: HIPAA, SOC 2, IAM, OAuth, AWS WAF, Agile Development, Code Review, Testing, Root Cause Analysis

PROFESSIONAL EXPERIENCE

Senior Full-Stack Developer | Ops.Work (formerly Flow Healthcare)

May 2018 – Present

Cloud-native SaaS platform used daily by healthcare organizations for onboarding, credentialing, learning, task management, forms, document collection, approvals, reminders, and workflow automation.

- Own full-stack development and production operations across React/TypeScript frontends, Node.js/Express backend services, REST APIs, PostgreSQL databases, AWS infrastructure, Kubernetes workloads, CI/CD, security, production support and a CMS public website.
- Led and independently executed a platform-wide UI/UX modernization, redesigning and rebuilding application pages with reusable React components and a cohesive design system, improving usability and mobile responsiveness while reducing duplicated frontend code.
- Architected and built an end-to-end customizable onboarding workflow system, designing the relational data model, backend services, APIs, and frontend experience to enable healthcare organizations to configure tasks, forms, document requirements, and approval processes.
- Own development initiatives from requirements gathering and technical analysis through architecture, implementation, testing, deployment, production support, and ongoing iteration.
- Design and maintain REST APIs, backend services, integrations, and relational data models supporting configurable healthcare business workflows.

- Build and operate containerized production services using AWS, Docker, Kubernetes, and Helm, and maintain CI/CD workflows using GitHub, GitLab, and CircleCI.
- Implement and maintain secure application functionality and third-party integrations using IAM, OAuth, REST APIs, and AWS WAF while supporting HIPAA and SOC 2 compliance requirements.
- Lead small teams of contract developers on project-based initiatives, defining technical approaches, decomposing and assigning work, guiding implementation, and conducting code reviews to maintain quality and architectural consistency.
- Collaborate directly with customers, business leaders, and internal stakeholders to gather requirements, evaluate technical options, explain tradeoffs, troubleshoot issues, and deliver practical software solutions.
- Diagnose and resolve production issues across application code, APIs, databases, authentication, third-party integrations, and cloud infrastructure.
- Participate in architecture decisions, technical planning, prioritization, code review, and continuous improvement of engineering practices and evaluate emerging technologies, including AI-assisted development and LLM-based workflows.

Software Engineer | Space Science & Engineering Center (SSEC), University of Wisconsin–Madison
January 2015 – May 2018

- Developed Python applications and Linux-based workflows supporting satellite imagery processing, validation, visualization, and scientific data analysis.
- Automated quality-assurance and recurring data-processing workflows, reducing manual effort and improving repeatability.
- Debugged and maintained production software and data-processing pipelines across Linux environments.
- Developed visualization and geospatial tools supporting satellite and atmospheric research.
- Worked with databases and supporting services used by scientific applications and research workflows.
- Partnered with scientists and engineers to translate research requirements into reliable software solutions.
- Trained new team members on applications, development practices, and technical processes.

EDUCATION

University of Wisconsin–Madison

Bachelor of Science in Computer Science

Minor in Environmental Studies
