

CHANCE HAMMACHER

Senior Software Engineer | Full-Stack Web Development | Cloud & SaaS

608-636-5666 | chance.hammacher@gmail.com | Madison, WI | [Linkln](#) | [Github](#)

PROFESSIONAL SUMMARY

Senior software engineer with 11+ years of experience designing, developing, and operating production software, including 8+ years building healthcare-focused SaaS applications. Experienced in end-to-end ownership across React and TypeScript frontends, Node.js backend services, REST APIs, PostgreSQL, AWS, Kubernetes, and CI/CD. Proven ability to translate business requirements into maintainable software, lead technical initiatives, modernize application architecture and user experiences, and deliver secure solutions in regulated environments.

PROFESSIONAL EXPERIENCE

Lead Full-Stack Developer | Ops.Work (formerly Flow Healthcare) May 2018 – Present

Cloud-native healthcare SaaS platform supporting **90 healthcare organizations** and **650+ users**.

Key Achievements: Reduced customer onboarding from **multiple days to ~3 hours** • Led complete UI modernization (**73 screens, 31 reusable React components**) • Maintained **99.9% production uptime** with **weekly releases**

- Own architecture, development, deployment, and production operations across React, TypeScript, Node.js, PostgreSQL, AWS, Kubernetes, CI/CD, and a CMS-driven public website.
- Architected a configurable onboarding platform supporting **120+ workflows** and **3,180+ onboarding tasks**, eliminating custom engineering for customer implementations.
- Designed and maintain **757 REST APIs** and a relational data model spanning **178 database tables** to power configurable healthcare workflows.
- Manage production infrastructure across **30+ AWS services**, Docker, Kubernetes, Helm, GitHub, GitLab, and CircleCI while improving reliability, scalability, and deployment efficiency.
- Partner with customers and executive stakeholders to define requirements, evaluate technical tradeoffs, and deliver scalable product solutions.
- Lead contract developers through technical planning, architecture reviews, implementation, and code reviews while establishing engineering standards.
- Improve platform reliability through production incident response, third-party integrations, authentication, and cloud infrastructure while supporting HIPAA and SOC 2 compliance.
- Drive technical strategy by reducing technical debt, evaluating emerging technologies, and introducing AI-assisted development and agentic AI concepts.

Software Engineer | Space Science & Engineering Center (SSEC), University of Wisconsin–Madison
January 2015 – May 2018

- Developed Python applications and Linux-based workflows supporting satellite imagery processing, validation, visualization, and scientific data analysis.
- Automated quality-assurance and recurring data-processing workflows, reducing manual effort and improving repeatability.
- Debugged and maintained production software and data-processing pipelines across Linux environments.
- Developed visualization and geospatial tools supporting satellite and atmospheric research.
- Worked with databases and supporting services used by scientific applications and research workflows.
- Trained new team members on applications, development practices, and technical processes.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL, Java, C/C++

Frontend: React, HTML5, CSS3, Tailwind CSS, Bootstrap, Responsive Design, CMS website

Backend & Data: Node.js, Express.js, REST APIs, PostgreSQL, SQLite, Relational Data Modeling

Cloud & Platform: AWS, Kubernetes, Docker, Helm, Linux

DevOps: Git, GitHub, GitLab, CircleCI, CI/CD, Deployment Automation

Security & Practices: HIPAA, SOC 2, IAM, OAuth, AWS WAF, Agile Development, Code Review, Testing, Root Cause Analysis

EDUCATION

University of Wisconsin–Madison

Bachelor of Science in Computer Science

Minor in Environmental Studies
